OVERVIEW

The EasyIP Ecosystem is an AV-over-IP conferencing system that delivers professional quality feeds for web-based conferencing solutions. It simplifies the BYOD conferencing experience by extending video, power and control over a standard 1Gb Ethernet network. The system enables up to four cameras to be switched and controlled from up to two USB decoders. This allows devices to be independently switched and controlled from both an in-room PC and user device (BYOD).

The system works on an IP-based infrastructure, sending video and control signals over the LAN using IP switching and configuration protocols. By offloading the extension and switching to a PoE switch, total cost of the system is reduced, providing a simple, more affordable alternative to traditional extension systems. The EasyIP solution eliminates the need for more expensive video switchers, controllers, extension systems and dedicated processing devices.

The EasyIP 10 Camera, sends 1080p/60 resolution feeds to the EasyIP Ecosystem for delivery to web-based conferencing solutions and connects to a 1 Gb PoE+ switch – eliminating the need for costly USB extensions.

IMPORTANT: This camera requires a PoE+ power source to operate (not included). Consider the EasyIP Base Kit 999-30200-005 which includes the Luxul AMS-1208P-EZ Switch, EasyIP 10 Camera and EasyIP Decoder.
